Engine Instructionz

1. Plugin Overview

The MSC Media Pro engine is a high-performance bridge between Bunny.net and Presto Player. It is designed to deliver 4K video streams without the overhead of traditional WordPress hosting.

2. How It Works

Instead of heavy files, we use **ID Links**. The engine instantly "wires" your content together only when a user requests it, keeping your site lightning fast and professional.

Engine Instructionz

> Detailed Overview

The MSC Media Pro system is a custom-engineered video architecture. Unlike standard WordPress sites that struggle with large files, this system is built to handle professional 4K cinema assets without sacrificing speed.

Core Features

Zero-Weight Storage

Your server never touches the actual video files. Everything is hosted in the "Vault" (Bunny.net).

The Custom "Videos" Hub

We created a dedicated area in WordPress just for your media, separate from regular Posts or Pages.

Native 4K Playback

Uses the Presto Pro engine to deliver adaptive bitrate streaming.

One-Click Swapping

Because we use **Video IDs**, you can update a video across your entire site just by changing a single field.

The Ecosystem Roles

Spaceship Hosting

The "Brain" – Manages the website, links, and user interface.

Bunny.net CDN

The "Muscle" – Delivers raw 4K data from global servers.

Engine Instructionz

How it Works

The MSC Engine logic follows three key steps to deliver high-end media.

1. THE SELECTION

User selects a video. No page refresh occurs.

2. THE CONNECTION

The engine fetches the video "Ticket" (ID) and connects to the CDN.

3. THE CINEMATIC EXPERIENCE

The 4K player is injected and playback begins instantly.

Engine Instructionz

> Setup Workflow

Follow these phases to ensure your infrastructure and content are properly linked.

Phase 1: The Integration (One-Time Setup)

1. CONNECT THE VAULT

Inside the **Presto Player Settings**, navigate to the "Bunny.net" tab. Enter your API Key and Pull Zone details. This allows Presto to "see" your video library.

2. POPULATE THE MEDIA HUB

Upload your 4K masters directly to **BUNNY.NET**. Ensure them appear in your "Stream" library. If the Media Hub is empty, the MSC engine will have no "Vault" to pull from.

Phase 2: Standard Content Entry

STEP 1: GET THE ID

From your Bunny.net dashboard, copy the specific **Video ID** for the content you wish to display.

STEP 2: CREATE THE LINK

In WordPress, go to **Videos > Add New**. Set your Title. Paste the Bunny ID into the **MSC Presto ID** field and publish.

Phase 3: Visual Polish

1. FEATURED IMAGE (THE POSTER)

On the right side of the editor, set a **Featured Image**. This acts as the video thumbnail in your library grid. Use 16:9 ratio images for the best cinematic look.

2. EXCERPT (THE DESCRIPTION)

Engine Instructionz

> Troubleshooting

Check these common solutions before reaching out for support.

Finding Your Bunny.net API Key

THE LOCATION:

Log in to your **BUNNY.NET** dashboard.
Click your Profile Icon in the top-right corner and select Account Settings. On the left sidebar, click **API Key**. Copy the "Account API Key" and paste it into the Presto Player settings in WordPress.

Common Technical Fixes

ISSUE 1: VIDEO DOESN'T POP UP

The Solution: Clear the Divi Cache. Go to **Divi > Theme Options > Builder > Advanced** and click **Clear Static CSS File Generation**.

ISSUE 2: SPINNING WHEEL OR "VIDEO NOT FOUND"

The Solution: The ID Audit. Verify the **MSC Presto ID** matches the Video ID inside Bunny.net exactly. If the ID is wrong, the "Vault" won't open.

ISSUE 3: MEDIA HUB IS EMPTY

The Solution: The Handshake Check. Verify Bunny.net API Key in **Presto Player Settings**. If you changed your Bunny password, update the key.

MSC ENGINE

Divi-Vader-Core

New

jonbeatz

Screen Options

Engine Instructionz

Detailed Logic

The Data Architecture

The MSC Engine operates as a "headless" media handler. It decouples the WordPress database from the heavy video assets.

THE POST TYPE: 'MSC_MEDIA'

Every video is a entry in the `msc\_media` table. It stores only metadata (Title, Excerpt, and the Custom Meta Field **msc_presto_id**). This keeps the database size minimal.

THE JAVASCRIPT HANDLER: 'CORE-DIVI-SCRIPTZ.JS'

When a user clicks a video, this script intercepts the event. It pulls the specific **MSC Presto ID** and triggers the AJAX request to fetch the Presto Player shortcode.

THE SHORTCODE INJECTION

The system dynamically generates: `[presto_player id="YOUR_BUNNY_ID"]` . This shortcode is then processed by WordPress on-the-fly and returned to the browser to be rendered inside the modal window.
