WP v6.9 Optimized

MSC Media Pro Engine

Mission-critical logic for your studio website.

- > **Custom Lightbox:** High-priority Presto API integration.
- > **Presto Player:** Dynamic video assignment via shortcodes.
- > **Streaming Video:** Videos streamed from Bunny.net API.
- > **MSC-Grade Logic:** Using MSC-Media-Scriptz engine.
- > **Advanced Custom Fields:** Featured Custom Video Integration.

MSC ENGINE

Engine Instructionz

Complete documentation for the MSC Media Pro engine, setup guides, and troubleshooting.

Setup Workflow

Follow these steps to get your studio site fully operational.

3/5 Complete

STEP 1

Connect Bunny.net CDN

Log in to your Bunny.net dashboard. Navigate to Account Settings > API Key. Copy the Account API Key and paste it into the Presto Player settings in WordPress.

BUNNY.NET

STEP 2

Configure Presto Player

Go to Presto Player > Settings in your WordPress admin. Enter the Bunny.net API key and configure your default player branding and behavior settings.

STEP 3

Set Up ACF Fields

Import the ACF JSON field groups provided with MSC Media Pro. These define the video assignment fields used across your site layouts.

STEP 4

Assign Videos to Pages

Edit any page or post and use the MSC Video Fields to assign Presto Player videos. The engine will handle shortcode generation and CDN routing automatically.

STEP 5

Verify Lightbox & Playback

Test your video pages to confirm the Custom Lightbox activates properly. Check that videos stream from Bunny.net and the player branding matches your settings.

MSC ENGINE

Engine Instructionz

Complete documentation for the MSC Media Pro engine, setup guides, and troubleshooting.

Troubleshooting

Check these common solutions before reaching out for support.

Finding Your Bunny.net API Key

THE LOCATION:

Log in to your **BUNNY.NET** dashboard.

- Click your Profile Icon in the top-right corner and select Account Settings.
- On the left sidebar, click API Key.
- Copy the "Account API Key" and paste it into the Presto Player settings in WordPress.

Common Technical Fixes

VIDEO DOESN'T POP UP

The Solution: Clear the Divi Cache. Go to Divi > Theme Options > Builder > Advanced and click Clear Static CSS File Generation.

SPINNING WHEEL OR "VIDEO NOT FOUND"

The Solution: The ID Audit. Verify the MSC Presto ID matches the Video ID inside Bunny.net exactly. If the ID is wrong, the "Vault" won't open.

MEDIA HUB IS EMPTY

The Solution: The Handshake Check. Verify Bunny.net API Key in Presto Player Settings. If you changed your Bunny password, update the key.

LIGHTBOX NOT TRIGGERING

The Solution: Script Conflict Resolution. Disable any third-party popup or lightbox plugins. MSC Media Pro's Custom Lightbox requires exclusive control of the overlay layer.

MSC ENGINE

Engine Instructionz

Complete documentation for the MSC Media Pro engine, setup guides, and troubleshooting.

Detailed Logic

A breakdown of the core files and systems that power MSC Media Pro under the hood.

MSC-Media-Scriptz Engine

mso-media-scriptz.php

The core script handler. Manages shortcode registration, video ID resolution, and dynamic iframe injection for Presto Player embeds.

PHP

Shortcodes

Core

ACF Field Mapping

acf-fields.json

JSON schema defining all custom fields for video assignment. Includes featured video, gallery grid, and category taxonomy bindings.

ACF

JSON

Fields

Cache Management Layer

mso-cache-handler.php

Handles static CSS generation, Divi cache integration, and Bunny.net CDN purge triggers. Ensures page speed scores remain optimized after content changes.

Cache

CDN

Performance

Bunny.net API Router

bunny-api-bridge.php

Bridges the Bunny.net Streaming API with WordPress. Manages authentication tokens, video library sync, and pull zone configuration.

API

Bunny.net

Streaming

Lightbox Controller

custom-lightbox.js

Front-end JavaScript handling the custom lightbox overlay. Intercepts click events, initializes the Presto API player instance, and manages fullscreen transitions.
